

StreamCo Platform Policy Guidelines

Document Owner: Legal & Compliance Division

Effective Date: January 1, 2025

Review Cycle: Quarterly

Content Moderation Policies:

All content uploaded to the StreamCo platform must comply with our content standards. Automated screening uses a three-tier system: AI pre-screening flags potentially problematic content, human moderators review flagged items within 24 hours, and a senior review board handles escalated cases. Content ratings (G, PG, PG-13, R) must be accurately assigned before publication.

Data Handling and Privacy:

StreamCo is committed to protecting user privacy in compliance with GDPR, CCPA, and applicable regulations. Personal Identifiable Information (PII) including names, email addresses, viewing history, and payment information must be encrypted at rest using AES-256 and in transit using TLS 1.3. PII must never be included in analytics reports, marketing materials, or shared with third parties without explicit user consent. All internal analytics systems must implement PII scrubbing before data processing. Viewer data retention policy: active account data retained indefinitely, deleted account data purged within 30 days, viewing analytics anonymized after 24 months.

Compliance Requirements:

All employees handling user data must complete annual privacy training. Data access is restricted on a need-to-know basis with role-based access controls. All API endpoints handling user data must implement authentication and authorization. Regular security audits conducted quarterly by external auditors. Incident response plan must be activated within 1 hour of any data breach detection.

Content Licensing and Rights Management:

All content must have verified licensing agreements before platform publication. Digital rights management (DRM) applied to all premium content. Geographic content restrictions enforced based on licensing territories. Content removal requests processed within 48 hours. Creator

revenue sharing follows standard 70/30 split for original content.

Advertising and Monetization:

Advertisements must comply with FTC guidelines for disclosure. No targeted advertising to users under 18. Ad frequency capped at 2 minutes per 30 minutes of content for Basic tier. Premium and Enterprise tiers are ad-free. Sponsored content must be clearly labeled. Data used for ad targeting must be anonymized and aggregated.

Accessibility Standards:

All original content must include closed captions within 48 hours of release. Audio descriptions required for all tentpole releases. Platform UI must meet WCAG 2.1 AA standards. Subtitle support for minimum 12 languages on all original content.

Security Protocols:

Multi-factor authentication available for all user accounts and mandatory for employees. API rate limiting enforced on all public endpoints: 100 requests per minute for authenticated users, 20 for unauthenticated. All database queries must use parameterized statements — raw SQL construction is prohibited. Secrets and API keys must never be committed to version control. Regular penetration testing conducted quarterly.
